Web Cam with Night Vision

FIDA's new Web camera, the PCC5020, is a glossy black 5 Megapixel device that packs an impressive array of features. Resolution is rated at 1.3 Megapixels with image sizes 2592 x 1944 pixels. It uses an ultra-wide angle lens that offers up to 71° viewing angle, quality pictures, and video to offer a better online communication experience.

The device plugs and plays easily, and has a built-in microphone and a functional base for use on desktop computers and notebooks. Making video calls on MSN Messenger, Yahoo Messenger, Skype and other compatible instant messaging services proved simple. Faces were clear and images look natural.

The infra-red night vision element is an interesting feature that may be useful for users who need a Web-based security cam. So remotely monitoring your home or office in any light condition is possible. But the device really works best as a video-conferencing camera. - *NR*

The PCC5020 Web Cam offers clear video for web conferencing.
